User Guide & Installation Manual

Happy Way v1.2

MT4/MT5

The Happy Way Installation File plus the Happy Way Installation Manual & User's Guide have been sent to your e-mail address as a single compressed file attachment. Save the attachment in a new \Downloads\Happy Way folder and extract the files.

Installation and Setup of the Happy Way v1.2 robot is very easily accomplished.

Note: All references to earlier versions in the screenshots below are understood to mean the current version.

Installation Process:

1. Double click on the Happy Way v1.2 icon.

2. The installation window opens with the compressed robot Happy Way v1.2.

3. Click the Browse Button, select the target folder where your MetaTrader4/5 is installed under \Program Files (x86) for MT4 and \Program Files for MT5, then click the Extract button.

4. When the installation is finished successfully, the installation window will be closed.

Robot Set Up in MetaTrader4/5:

1. Launch MetaTrader4/5 where your robot Happy Way v1.2 is installed.

2. Select the AUDCAD, AUDCHF, AUDUSD, CADCHF, USDCAD diagram window and set the diagram to H1.

3. Use your mouse to move the robot Happy Way v1.2 into the diagram.

- The figure opens where you need to check: Enable alerts, Allow live trading, Allow DLL imports, Allow import of external experts.

- Robot Parameters Set Up (Inputs)

Name_EA: name of the robot

Serial_Number: Locate in email: Serial_Number that we sent as part of your installation package. We use an expiration date to help secure the robot against piracy. If you are a legitimate registered user, you will receive a replacement email before the expiration date, if a new version update is not issued before then. Copy and Paste the number into the Serial Number field of the Inputs tab as shown above.

Magic: distinguishes Happy Way robots from other robots based on the same name. Magic must change for all currency pairs.

(A) Day of trading

(MON-SUN): day selection true/false. The robot will not trade during the dates that are off (false). (Default setting: true)

(B) Scale of lot

Lots: scale of the first open lot.

Recommended setting for the lot in the first deposit to the account.

Deposit for 1 currency pair	Lot for 1 currency pair	
1000,-	0.01	
2.000,-	0.02	2 x 0.01 = 0.02
10.000,-	0.1	10 x 0.01 = 0.1
100.000,-	1	100 x 0.01 = 1

Lot_Multiplier: used to calculate lot size for the next position (Default setting: 1)

Slippage: difference between planned and really reached price. (Default setting: 4)

(C) Arrangement of trades in points

Arrangements_of_trades: scale set up between individual trades in points. (Default setting: 100)

Profit_all_orders: closing of all orders (trades) in the given profit you select.

Recommended setting of profit, regarding deposit in the account.

Deposit for 1 currency pairs	Profit of all orders for 1 currency pair	
1000,-	5	
2.000,-	10	$2 \times 5 = 10$
10.000,-	50	$10 \times 5 = 50$
100.000,-	500	$100 \times 5 = 500$

(D) Time of trading

Hour_of_trading_from: robot will trade from the hours you set. (Default setting: 0)

Hour_of_trading_to: robot will trade to the hours you set. (Default setting: 24)

(E) Set up of loss scale

Set_up_of_loss: amount_of the loss will be active with setting to true; with setting to false, this function is off. (Default setting: false)

Amount_of_loss: amount which you are able to risk. (Default setting: 0)

(F) Closing of all open trades

Closing_of_all_trades: with the setting to true and confirming with the OK button, all open trades will be closed; with the setting to false, this function is off. (Default setting: false)

(G)Regular TP & Trailing SL (pips)

UseTrailingStop: with the setting to true, UseTrailingStop will be active and for false, this function will be off. (Default setting: false) Trailing stop uses Order Id to identify open order and trail it based on trailing parameters set here. It starts trailing once price moves distance TrailingStop+TrailingGap. Then it moves trailing stop based on TrailingStop but leaves TrailingGap. Using those two parameters you can change trailing behavior significantly. Trailing works best if original order stoploss is less than TrailingStop+TrailingGap.

6. Entering of serial number

The serial number along with the robot has been sent to your e-mail address. Insert this number into the field Serial_Number.

Launch of Happy Way robot:

Once all Inputs have been set, click OK to close the properties Page.

Insure the Auto/Algo Trading Button is depressed; the Green Play Arrow is now seen.

When all is correct the "Smile" emoticon will appear in the upper right corner of the chart. A "Sad" emoticon indicates there is an error.

If the serial number is incorrect, you will see "INVALID KEY!". The robot will not trade until a valid, unexpired Serial Number is correctly entered. See above discussion at #5 for Serial Number information.

This is the sample of right launched Happy Way robot.
